Comments **I am supportive of the new Visitor Centre for Stonehenge, and like the way the stones will look without any surrounding clutter.**

I find the supporting documents difficult to download and navigate through (there are so many!) so forgive me if my point has already been covered:

The pictures shown on the Visitor Centre website suggests that the transportation of visitors between the car park and the site itself is going to be carried out by fuel hungry vehicles pulling trailers (a big tractor is shown and a 4x4).

I would like to suggest that vehicles with low CO2 emissions are used, such as hybrids, LPGs, electric vehicles, or maybe have more vehicles transporting fewer people, which are drawn by horses. The manure would be good for the grass too!

But, please, no big fat tractors or 4x4, that's just not in keeping with what is trying to be done here.

Thank you for the opportunity to comment.
