

Dear Adam Madge

Stonehenge Visitor Centre & Car Park: Application S/2009/1527

Thank you for the public invitation to comment upon this submission.

I note with alarm, the size and extent of the proposed Visitor Centre building and its associated engineering works, and its adverse visual impact on the surrounding landscape, and consider that in particular, the effect of visible lighting sources by day and of light-pollution at night should be mitigated in terms of their impact on the overall Stonehenge World Heritage Site.

A most comprehensive landscape analysis and management policy must further be an integral part of any planning conditions.

Yours sincerely

Donald W Insall
